45S Standard Kit

45S on Tripod

## **Fujikura 45S Fusion Splicer**

The 45S cladding alignment fusion splicer is changing the way people splice fiber in small to mid-fiber count applications. This Fujikura splicer debuts a landmark improvement to the fusion splicing process with the ability to prepare and load both fibers simultaneously. The hand-held fiber coating stripper, the SS-05, is capable of stripping two 250 µm coated fibers in the same pass, along with the CT-16A cleaver adapter plate which can likewise accommodate two bare fibers for cleaving. After preparation, the 45S patented sheath clamps enable loading both fibers simultaneously into the splicer with one fiber in each hand. The user can press down on the sheath clamp base to close it while positioning the fiber in the v-grooves. This enables one-handed operation.

Furthermore, the 45S sheath clamps are mechanically linked to the wind protector, so after splicing is finished, opening the wind protector also opens both sheath clamps for quick sleeve positioning and transfer to the tube heater. The 45S tube heater shrinks sleeves much faster than its predecessor with a nominal  $\sim$ 20 second heat time for 60 mm sleeves down from  $\sim$ 26 seconds. The simultaneous fiber preparation capability, automated sheath clamp opening, and a faster tube heater, combine to lower the overall fusion splicing cycle time by  $\sim$ 30% or more.

The 45S continues to benefit the user experience with improvements to fiber placement, battery access, and machine ergonomics. Previously, when using sheath clamps, if the cleaved fiber was accidentally set past the electrode centerline, the machine would send an error and require manual intervention. The 45S will now accept this mistake and reverse the fiber to correct position automatically. With a cube form factor, the 45S is easily transported and operated in space-constrained environments. The adjustable screen can alleviate glare from the sun and adjust with abnormal splicer positions confronted in challenging splice locations.

Backed by the best service team in the industry, the Fujikura 45S is the ideal splicer to use when portability, ruggedness, speed, and reliability are needed. If you'd like to see the 45S capabilities first-hand, please contact us at 1-800-235-3423 to arrange a product demonstration at your earliest convenience.

#### **Applications**

- 5G Small Cell Site
- FTTx drops and terminations
- MDF/IDF splices and terminations
- Rural fiber deployments and restorations

#### **Features**

- Simultaneous fiber preparation with newly patented sheath clamp design
- Sheath clamps automatically opened with the wind protector
- Automatic fiber placement correction
- Active Fusion Control for arc optimization with every splice
- Active Blade Management for cleave quality monitoring and correction
- Easy-access battery, screen position adjustments, and ergonomic adaptations
- Fully ruggedized for shock, moisture and dust resistance

# **Fujikura 45S Fusion Splicer**

#### **Features**

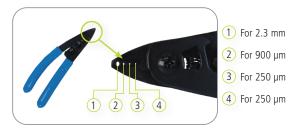

Sleeve Positioning

Work Tray with Neck Strap

CT-16A Adapter Plate on CT-50

Fiber stripper SS-05

#### **Ordering Information**

| DESCRIPTION                                                                                                                                           | AFL NO. |

## **Fujikura 45S Fusion Splicer**

#### **Specifications**

| PARAMETER             |                     | VALUE                                |
|-----------------------|---------------------|--------------------------------------|
| Data storage          | Splice mode         | 100 splice modes                     |
|                       | Heat mode           | 30 heat modes                        |
|                       | Splice result       | 20,000 splices                       |
|                       | Fiber image         | 100 images                           |
| Screw hole for tripod |                     | 1/4-20UNC                            |
|                       | Automatic functions | Fusion control                       |
|                       |                     | Blade management and control         |
|                       |                     | Splice start                         |
|                       |                     | Heater start                         |
|                       | Reference guide     | PDF file stored on splicer           |
| Other features        | Sheath clamp        | Open with/without wind protector     |
|                       |                     | Close when setting fiber             |
|                       |                     | Easy sleeve positioning design       |
|                       | Electrode           | Tool-less replacement                |
|                       | PC Software         | Splicer firmware update via internet |
|                       |                     | Parameter Upload and download        |

#### NOTES:

- \*1 Cleave length range depending on fiber type
  - 5-16 mm: 125  $\mu$ m cladding dia. And 250  $\mu$ m coating dia.
  - 10 16 mm: 125  $\mu$ m cladding dia. And 400 or 900  $\mu$ m coating dia.
- \*2 Measured with cut-back method relevant to ITU-T and IEC standard after splicing Fujikura identical fibers. The average splice loss changes depending on the environmental condition and fiber characteristics.
- \*3 Measured at room temperature. The definition of splice time is from the fiber image appearing on the LCD monitor to the estimated splice loss. The average splice time changes depending on the environmental conditions, fiber type, and fiber characteristics.
- \*4 Measured at room temperature with the AC adapter. The heat time is defined from the start beep sound to the finish beep sound. The average heat time changes depending on the environmental conditions, sleeve type, and battery pack condition. In addition, since the heating operation is constantly optimized, the average heating time changes depending on the usage conditions of the fusion splicer.
- \*5 The electrode life changes depending on the environmental conditions, fiber type, and splice modes used.
- \*6 Test Conditions
  - Splice and heat time: 1 minute cycle
  - Using the splicer power save settings, subject to our testing condition
  - Using a new battery
  - Room temperature
  - The battery capacity changes when testing in different conditions than above
- \*7 The battery capacity decreases to half after approx. 500 discharge and recharge cycles. The battery life is shortened further when using outside of the storage and operating temperature ranges, or if completely discharged when stored for an extended period without recharging.
